

➤ Multiple Tube Sets For Spectrometer Systems

We produced Multiple Tube Sets for

***Multiple Spectroscopic Analysis in Medicine such as blood, urine...**

1. All the vacuum tubes are produced in the clarification plants and their walls are cleaned by ultrasonic waves and washed by deionized water, sterilized by cobalt 60 radiation, while the inner walls are siliconized, produced in a clean room which prevents foreign particles from entering the products effectively.
2. The tubes adopt a double cover design and are well sealed by medical-purpose butyl disks, which ensure a stable vacuum during the product's validation period. The internal sides of the tubes are coated with a lubricant, and the outside is sleeved with plastic safety caps, which make opening and closing much easier. The sideways opening style can prevent blood splashing and pollution.
3. The tubes adopt international general colored caps, which are easy for identification, selection, and classification, and can prevent mixing and mistakes during operations.
4. The PET tubes are produced according to international norms with good compatibility and suitability for varied chemical and biological analysis, immunochemistry, and blood testing. The materials are light and firm, capable of bearing 5000g centrifugal acceleration, and have the characteristics of easy transportation and processing, which make immediate direct high pressure sterilization after use or destruction possible without any poisonous gas emission and are environmentally friendly.
5. Using US-produced coating equipment and technologies, which make additives evenly coated on the walls to avoid mis-inspection and re-inspection.

KUANTUMEK TECHNOLOGY®

6. The vacuum room can maintain the status 24 months to ensure the accurate blood sampling dosage. Different kinds of vacuum level tubes are for your choices according to the temperature and sea levels.

7. According to the requirements of the customers, we can supply the double labels tubes and strip code tubes to ensure the patients test accurate and convenient for the renew of the hospital management system

Description:

In recent years, due to the rapid development of clinical testing methods and progress on the automatic analytical instruments, the customers make more requirements on the blood sample collection system not only safety but also accurate, easy for operation, products quality and can preserve the sample's original characters, the blood storage time. Inducing the wholes sets of vacuum blood tube producing lines, We are advocating to the R&D and manufacturing vacuum blood tube on the shoulder of the mature blood collection technologies from abroad. We have innovated the methods and used the special accurate instruments to control the critical aspects affecting product's quality, such as the process of tube wall, vacuum tightness, loadability of separation gel and dosages. Our vacuum blood tubes are safer, simpler, more accurate and more economical which can meet different requirements of the medical care persons and research and development personnel
